X

```
isah = 0
         3.
4.
5.
6.
7.
                   kong = 0
other = 0
for i in str1 :
                       if i.isdigit():
    num +=1
elif i.isalpha():
         9.
                        isah +=1
elif i.isspace():
kong +=1
        10.
        11.
12.
                        else:
        13.
             other +=1
return num,isah,kong,other
print(statistics(' das1 32 a2da'))
        15.
      (4,6,3,0)
  正确答案: (4, 6, 3, 0) 或 (4,6,3,0)
5
     如下程序的运行结果是
              def convert( num):
    flag=0
    if num==0:
         4.
5.
                   if num<0:
         6.
7.
                     num=num*(-1)
                   flag=1
str1=""
         8.
                   while num:

str1= str(num % 7) + str1

num=num//7
        10.
11.
                   if flag==0:
return str1
        12.
                   else:
        14.
                        return "-" + str1
              print(convert(-17))
        16.
      -23
  正确答案: -23
     已知x = {1:2, 2:3, 3:4}, 那么表达式sum(x)的值为_
      6
  正确答案:6
7
     已知x = {1:2, 2:3, 3:4}, 那么表达式sum(x.values())的值为
      9
  正确答案:9
     已知字典x = {i: str(i+3) for i in range(3)},那么表达式sum(x)的值为_
      3
  正确答案:3
9
     已知字典x = {i: str(i+3) for i in range(3)},那么表达式sum(item[0] for item in x.items())的
      值为_
      3
  正确答案:3
10 如果函数中return语句不带任何返回值,那么该函数返回值为_
```

None	
正确答案: None
