

```
num +=1
elif i.isalpha():
         8.
9.
10.
11.
                           isah +=1
elif i.isspace():
         12.
13.
                           kong +=1
else:
other +=1
         14.
         14. other +=1
15. return num,isah,kong,other
16. print(statistics(' das1 32 a2da'))
       (4,6,3,0)
  正确答案: (4, 6, 3, 0) 或 (4,6,3,0)
5
      如下程序的运行结果是
                def convert( num):
    flag=0
    if num==0:
        return "0"
          1.
          2.
3.
4.
         -23
  正确答案: -23
      重做
```
